

# THE ANTI-JAM COIN SLOT

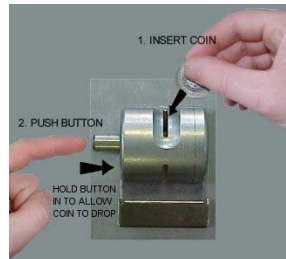

## THE ANTI-JAM COIN SLOT

Preventing coin jamming and blockages of the coin chute

**Stop the costly  
downtime of your  
machines from coin  
jams or vandalism of  
the coin chute.**

Whether it's a deliberate blockage of your coin chute or accidental coin jamming, a blocked coin chute means expensive downtime for your machine and engineering costs.

The unique Anti-Jam coin slot from Safer Systems prevents costly coin chute obstruction, simply and effectively.

### SAVING YOU MONEY ...

Following extensive UK trials, the unique design of the Anti-Jam coin slot has proven highly effective in reducing engineering call-outs by as much as **23%**.

The coin slot has been designed to prevent costly jamming of the coin entry by foreign bodies, such as paper, lollipop sticks, paper clips and other such objects.

### SAVING YOU TIME ...

Where a jam is caused, the coin entry is simply cleared by inserting a coin or similar object into the slot, pushing the blocking material out of the bottom of the device.

There is no need for expensive engineering call-outs and the machine keeps working for you and your customers.

Jamming through coins is also prevented as the coin slot ensures coins are fed through the machine at a regulated speed.
