

CUSTODIAN CASH HANDLING SYSTEM

CUSTODIAN CASH HANDLING SYSTEM

Locks out Internal Theft & keep cash secure

Ensure your profits are protected. The Custodian is a secure, tough, self-locking cash bag that is designed to replace an existing vending machine cash box.

Custodian - the cash handling system that offers ease of use, secure cash collection and reliable security.

Maximise and secure your vending machine profits, whilst reducing operator workload with Custodian.

Custodian: cash security in a bag.

TOUGH ON CRIME

Why share your profits with thieves?

Custodian's self-locking lid is activated when the bag is being removed from the vending machine funnel, locking out potential thieves and securing your cash.

The bag also features a built-in tamper-evident mechanism to warn if unauthorised access has been attempted.

Security is further enhanced by the use of a unique key code for each customer; Safer Systems keeps a database of all key codes, ensuring only authorised personnel can order replacement keys. Also, every bag and lid features a security code, enabling fast and reliable tracing of customer, key code, depot etc for added peace of mind.

EASY TO USE

But security is not the only factor to consider when looking for the ideal cash handling system for your operation - it must be easy and simple to use for operators.

Brackets, specifically designed to fit most vending machines, allow for the light and durable bags to slot into place. It only takes a matter of seconds.

Every time the lid of the bag is removed at the secure cash room using your unique key, and then replaced back on the bag, it is automatically re-primed and ready for fitting onto another machine. The operator simply switches the existing full bag for an empty one. It couldn't be simpler, quicker or more discreet.

COST EFFECTIVE

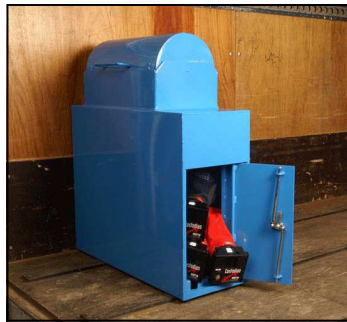

Operators no longer have to attempt to empty a large heavy metal cash box or bag into a flimsy canvas cash bag, trying not to spill any of its contents. They simply take one bag out and secure another in its place.

Instead of constantly having to replace rigid metal cash boxes which get damaged during transportation and general use, the durability of the cash bag ensures it is able to endure the rigors of handling and transit.

CUSTODIAN CASH HANDLING SYSTEM

CUSTODIAN CASH HANDLING SYSTEM

ENHANCED SECURITY

- Tamper-evident mechanism
- Individually numbered bag & lid for traceability
- No exposed locking mechanisms
- Only one key required
- Bespoke lock from Mizmatic
- All keys registered with Safer Systems' Lock & Key Register
- Quick & discreet cash collection in public sites
- Suitable for use in vehicle roll-top safes
- Durable, shock resistant nylon body
- Flame resistant, anti-rip bag
- Company logo screen printed onto bag (optional)

IMPROVED OPERATING DESIGN

- Automatic re-priming mechanism
- Lightweight construction
- Compact
- Brackets designed for most vending & gaming machines.
- Swivel head to prevent coin blocks in neck
- Compatible with audit systems
- Pocket at bottom for storage of audit sheets

COST SAVINGS

- The same bag fits all machines
- No side lock means fewer keys & quicker bag changes.
- Reduces the possibility of internal damage after break-ins
- Longer operating life than conventional cash box
- Less workload for the operator
