

EASY BUILD SURROUNDS

EASY BUILD SURROUNDS

The system you can bank on for better returns

In an industry where presentation is all important, why not create the *right* image at the *right* price – and keep your customers happy.

With an increasingly sophisticated vending market, comes the need to provide an environment that looks both aesthetically pleasing and consumer appealing.

(Above) The versatile Easy Build System allows for any size of machine to be fitted with a surround.

(Above & Below) The Easy Build can house any combination of machines and, because it can easily be dismantled and used again, it gives you the flexibility to place any machine where it works best for you with minimum fuss and expense.

Now, with Safer Systems, comes the next generation in vending surrounds, with our unique collection of surrounds for single and banked machines – maximizing profits and minimizing costs.

BE SEEN ...

With full graphics options, the uniquely-designed vending surrounds provide the ideal platform on which to market your product and maximize sales.

Whether styling your vending area for the corporate market in offices and cafeterias, or the young and trendy look for schools, colleges and retail parks, you'll get the right look at affordable prices.

Whatever you choose, the eye catching graphics will encourage impulse sales through maximum use of your visual presentation.

All our surrounds are CE marked and PAT tested for added peace of mind. They also comply with EC legislation.

BE SAFE ...

Safer Systems offers a security upgrade option, providing the effective vandalism and crime barrier that is needed in those isolated locations.

The secure systems retain all the eye-catching impact of the other banking systems, but provide high-grade surrounds, with tough polycarbonate and metal framed doors. So lock out the criminals and place your machines where they will work best for you.

BE FLEXIBLE ...

The surround collection can be modified to reflect your exact vending requirements, for multi-machine sites. Machines can easily be added, changed or removed, giving you a flexible housing option.

And, because the surrounds are housed in metal, they are durable, ensuring your machines keep looking good for longer.

The surrounds come flat-packed and can be installed in just a few hours, with full install services available where required.

Chose Safer Systems – you can bank on us.

EASY BUILD SURROUNDS

EASY BUILD SURROUNDS

(Above) The brush strips provide a tidy finish, whilst allowing for access to the sides of the machine.

(Above) The design of the system means that it does not need to be bolted to either the wall or the floor, nor do the machines.

No Need To Bolt Down To The Floor Or Wall

SPECIFICATIONS ...

Our 'Easy Build' surrounds consists of an aluminium chassis which is then cut to size to suit the vending machines that are to be housed. In between each of the aluminium pillars, on the side and above each vending machine, we place panels which are of a durable metal composite which give a perfect surface area on which any marketing graphics can be applied.

To ensure the tidy, and hence pleasing effect of the housing, the gaps between the vending machines and the surround are filled with nylon brush strips.

The unit is CE marked and conforms to all EC legislation. To conform with current legislation all sockets for vending machines are located on an accessible power plate which will aid PAT testing at a later date, as well as isolation.

OWN BUILD ...

One of the main benefits of using our Easy Build surround is that the simple design enables your own engineers to be trained to install the surround; the only tools required are an allen key and screwdriver.

PRACTICAL ...

The unique design means that the surround does not need to be bolted to the floor or wall.

The Easy Build gives you flexibility: machines can be replaced or added at minimal cost and the whole structure can be transported and reused again at other locations.
