

A GUIDE TO YOUR LOCKING OPTIONS

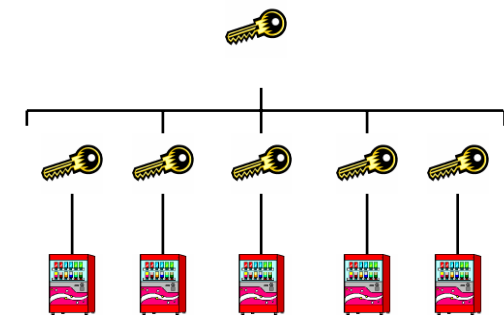

CHANGE LOCK

A number of unique customer codes built into each lock cylinder, which allows a simple change of code in the event of key compromise without having to remove the lock from the machine.

MASTER-KEYED ALIKE

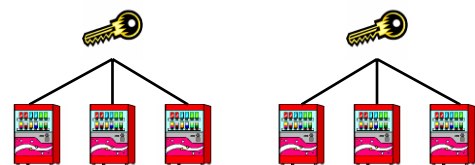

A master key will open each lock in all keyed-alike sets.

MASTER-KEYED

Each lock has its own unique key. A master key enables the authorised user to gain access to all the locks within the ascribed group.

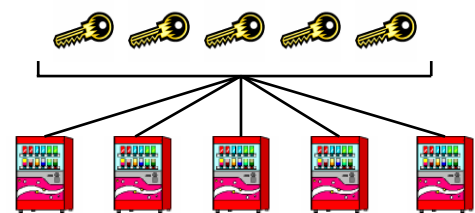

This system is ideal for large vending & gaming operators; access can be gained by customers to their machines only, whilst your authorised staff have access to all the machines for maintenance etc.

SETS OF KEYED-ALIKE

A single key pattern gives access to each separate set of locks within the series. No interchanges possible.

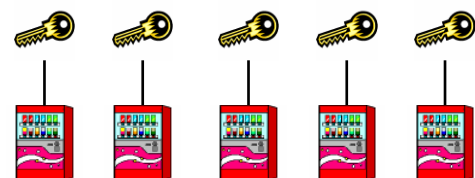

This system is ideal for route operators or engineers within a large estate.

KEYED ALIKE

A single pattern key enables all key holders to open EVERY LOCK in the system.

This offers the ideal security solution for small/medium vending & gaming operators.

KEYED DIFFERENTLY

Each lock has its own unique key, which cannot access any of the other locks in the estate.

This system offers the ideal locking solution for rental customers without a maintenance contract.
