

## VAN LOCK LOCKING SYSTEMS

The superior locking system, offering a flexible security package for all vending operators.

No matter how sophisticated your security procedures are, effective protection begins with your locks and keys. High quality lock & key systems are a valuable investment in helping you improve your vending operations and reducing vending crime.

### SECURITY

Each client is issued a unique code, from one of the 5 million combinations available. Your unique code is recorded on Safer Systems' Security Key & Lock Register, preventing unauthorised individuals obtaining your locks and keys. The distinctive key design also prevents duplication of your unique keys.

### FLEXIBILITY

Van Lock offers a locking system that is right for your business, providing the flexibility you need. Whether you require a single code for all your machines, or access to all machines, whilst restricting your customers to their machines only, there is a system to suit your operation.

### DURABILITY

The distinctive flat-faced design of the locks prohibits vandalism by chewing gum, superglue etc, reducing the need for costly lock & key changes and machine downtime. Each lock also comes with the option of a hardened steel anti-drill face.

# VAN LOCK LOCKING SYSTEMS

VAN LOCK OFFERS THE VERSATILITY YOU NEED.

## **Vanamatic Combination Locks & Keys**

- 8 combinations per lock series
- High security change
- Quick field code change in under 10 seconds
